

## Cybersecurity Basics 2

### Name That Hacker! Cards

<p>A hacker launches an attack to steal users' credit card numbers.</p>	<p>A hacker discovers a security vulnerability in a program and discloses it to the developer, so that it can be fixed immediately.</p>
<p>A hacker finds a security vulnerability in a program and sells it to an organization on the black market.</p>	<p>A hacker is employed to test an organization's computer security systems and reports back with information about how to make them more secure.</p>
<p>A hacker discovers a security vulnerability in a program and discloses that information publicly.</p>	<p>A hacker dislikes a particular website and creates a botnet that floods that website with so much traffic that it shuts down.</p>
<p>A hacker compromises a computer system without permission but tells the organization after the fact so they can fix the problem.</p>
