

# Energy Quiz

Energy is a resource that helps items we use every day work. Energy charges the batteries for phones and computers. Energy gives us light in our homes. It can also help keep our homes warm during cold weather and cool during hot weather. It takes a lot of resources to bring energy into our homes. That's why it's important not to use more than we need!

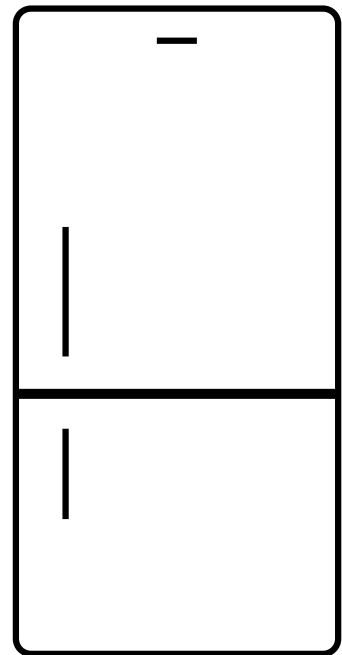

Below is a list of five items that use the most energy in homes. Which one do you think uses the most energy? Which uses the lowest amount of energy? Put them in order, with one being the object that uses the most energy and five using the least.

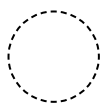

**Television**

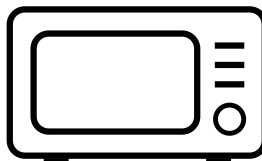

**Dishwasher**

**Refrigerator**

**Heating and air conditioning**

**Microwave**

*Answer key: ranking from highest energy user to lowest energy user:  
1. Heating and air conditioning 2. Refrigerator 3. Dishwasher 4. Television 5. Microwave*
