Coding Basics 2

Example Boolean into IF Statement

True or False Question
"True or false: Are you older than me?"

if TRUE		if FALSE

Response:		Response:
Yes, I'm older than you!		No, I'm not older than you!
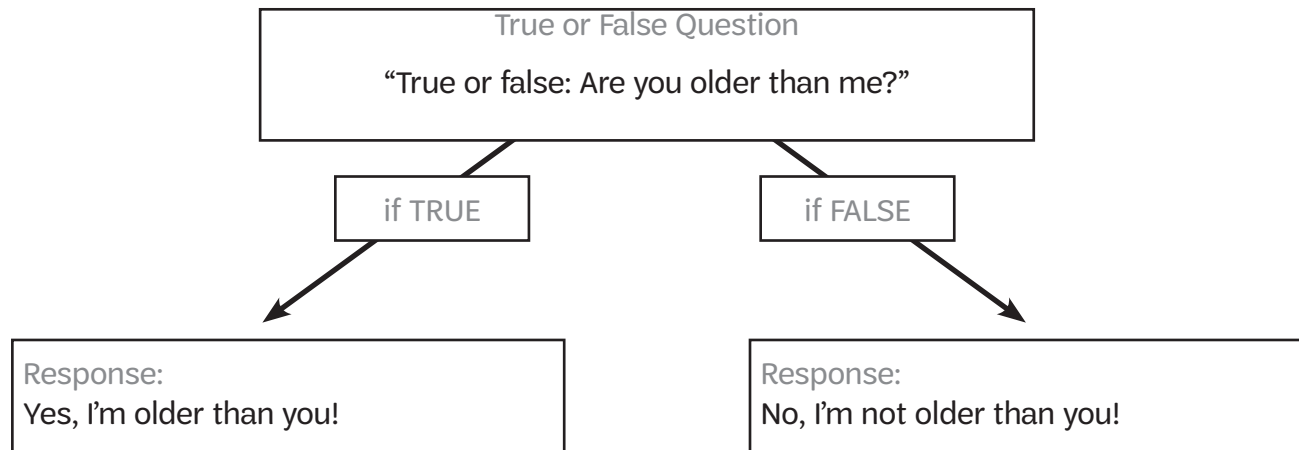

Same thing in JavaScript Syntax:

```
text("True or false: Are you older than me?")
if (yourAge > myAge) {
    // If TRUE display this response
text("TRUE: yes, you are older than me!")
} else {
    // Else FALSE display this response
text("FALSE: No, you are not older than me!)
}
```
