

Just like you observed natural objects, you can also collect and share data about birds.

Date

Time

Location

birds. Where are you going?
What kinds of birds normally
live there?

3. Tally the birds you see.

For example, if you see 3 cardinals, write the bird's name or draw it. Then make 3 tally marks.

When you're done, add your tally marks to find the total number for each kind of bird. Add these numbers together to find the total number of birds you saw.

5. Share your data. Think about what your data means. How can you share it with other people?
