

Recycling

Words to Know

A **natural resource** is any part of nature that humans use.

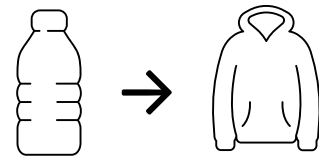

Recycling is the process of using materials (like plastic, metal, or paper) to make something new.

The **environment** is all of the elements that make up nature, like air, water, and sunlight, that help people and animals to live.

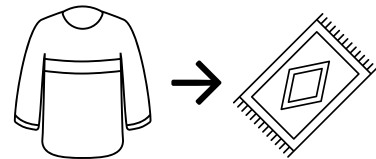

Compost is made when natural leftovers (like fallen leaves, fruits, vegetables, and eggshells) are mixed with soil to give it more nutrients and help plants grow stronger.

A **landfill** is an area where trash is kept and buried in the ground.

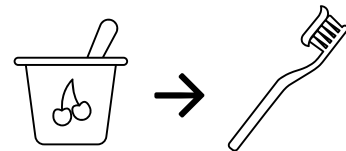

Did You Know?

- Plastic water bottles can become fleece jackets.

- Old clothes can become rugs.

- Yogurt cups can become toothbrushes.
