

## Between Earth and Sky

### SEEDS...

Seeds are baby plants just waiting to grow. They can be blown by the wind or carried by animals or water. They can stick to clothes and shoes, too. These are the ways seeds travel far from home.

How many seeds do you see floating here?  
What seeds do you see where you live?  
Are any of them from far away?  
Ask and explore! Share what you learn!

### ...AND WEEDS

Weeds are plants that grow where they're not wanted.

Weeds can be beautiful. But they can crowd out important plants.

The best-known weed is the dandelion. It belongs to the daisy family, the largest flower family in the world.

Where have you seen dandelions?

Have you ever blown or kicked dandelion seeds? Where did they land?

Oh, no!  
My seeds!  
Stop the car!

After being outdoors, check your clothes and shoes for seeds. Don't carry seeds away from their home to yours!
